

qwen2.5_zero_shot
[OK] normal (conf: medium)
correct = True
faith = 0.5
fluency = 0.5

findings:
-

explanation:
No significant findings observed in the chest X-ray.

Same chest X-ray, four models

qwen2.5_lora
[OK] normal (conf: high)
correct = True
faith = 0.0
fluency = 0.0

findings:
-

explanation:
The chest X-ray shows no signs of consolidation, infiltrates, or other radiographic features indicative of pneumonia.

qwen3_zero_shot
[OK] normal (conf: high)
correct = True
faith = 1.0
fluency = 1.0

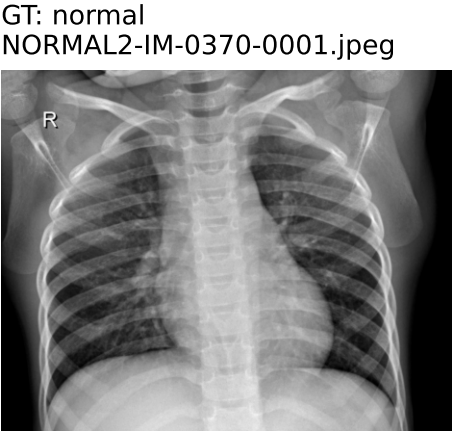

findings:
clear lung fields, visible rib cage and spine

explanation:
The chest X-ray shows symmetrical lung fields without consolidation, infiltrates, or pleural effusion, consistent with a normal chest.

qwen3_lora
[OK] normal (conf: high)
correct = True
faith = 1.0
fluency = 1.0

findings:
clear lung fields, visible rib cage and spine

explanation:
The chest X-ray shows no signs of consolidation, infiltrates, or abnormal opacities that would suggest pneumonia.

qwen2.5_zero_shot
[OK] normal (conf: medium)
correct = True
faith = 1.0
fluency = 0.5

findings:
-

explanation:
No significant abnormalities observed in the lung fields, trachea, or mediastinum.

qwen2.5_lora
[OK] normal (conf: high)
correct = True
faith = 0.0
fluency = 0.5

findings:
-

explanation:
No signs of consolidation, atelectasis, or pleural effusion that would be indicative of pneumonia.

qwen3_zero_shot
[X] pneumonia (conf: medium)
correct = False
faith = 0.0
fluency = 1.0

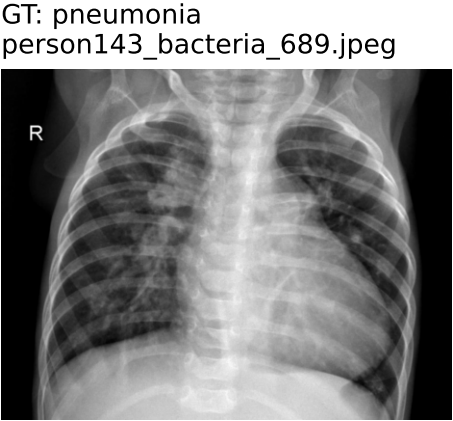

findings:
increased opacity in right lower lung zone, consolidation pattern

explanation:
The chest X-ray shows patchy opacities consistent with consolidation, particularly in the right lower lung zone, which is suggestive of pneumonia.

qwen3_lora
[OK] normal (conf: high)
correct = True
faith = 1.0
fluency = 1.0

findings:
clear lung fields, visible rib cage and spine

explanation:
The chest X-ray shows no signs of consolidation, infiltrates, or abnormal opacities that would suggest pneumonia.

qwen2.5_zero_shot
[X] normal (conf: high)
correct = False
faith = 1.0
fluency = 0.0

findings:
-

explanation:
The lung fields appear clear without any signs of consolidation, infiltrates, or masses that would suggest pneumonia.

qwen2.5_lora
[X] normal (conf: high)
correct = False
faith = 1.0
fluency = 0.0

findings:
-

explanation:
The lung fields appear clear without any visible consolidation, infiltrates, or masses that would suggest pneumonia.

qwen3_zero_shot
[OK] pneumonia (conf: medium)
correct = True
faith = 1.0
fluency = 0.5

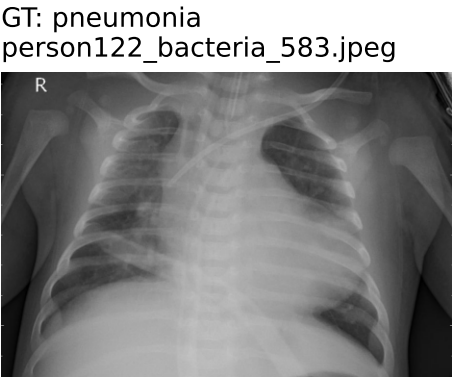

findings:
bilateral lung opacities, increased lung density

explanation:
The chest X-ray shows bilateral lung opacities consistent with pneumonia.

qwen3_lora
[OK] pneumonia (conf: medium)
correct = True
faith = 1.0
fluency = 0.5

findings:
bilateral lung infiltrates, increased opacity in lung fields

explanation:
The chest X-ray shows bilateral lung infiltrates consistent with pneumonia.

qwen2.5_zero_shot
[X] normal (conf: medium)
correct = False
faith = 1.0
fluency = 0.5

findings:
-

explanation:
No signs of consolidation, atelectasis, or pleural effusion that would be indicative of pneumonia.

qwen2.5_lora
[X] normal (conf: medium)
correct = False
faith = 0.0
fluency = 0.5

findings:
-

explanation:
No significant abnormalities observed in the lung fields.

qwen3_zero_shot
[X] normal (conf: high)
correct = False
faith = 1.0
fluency = 1.0

findings:
clear lung fields, visible rib cage and spine

explanation:
The chest X-ray shows symmetrical lung fields without consolidation, infiltrates, or pleural effusion, consistent with a normal chest.

qwen3_lora
[X] normal (conf: high)
correct = False
faith = 1.0
fluency = 1.0

findings:
clear lung fields, visible rib cage and spine

explanation:
The chest X-ray shows no signs of consolidation, infiltrates, or abnormal opacities that would suggest pneumonia.
